

Git Workflow Cheat Sheet

PhortexPhotoPortfolio — dev / main branch workflow

Day-to-day development (always on dev branch)

1. Code something

edit files in VS Code

2. Stage changes

```
git add .
```

3. Save snapshot

```
git commit -m "..."
```

Back up to GitHub (do this often)

```
git push
```

Going live (merging dev → main)

1. Switch

```
git checkout main
```

2. Merge

```
git merge dev
```

3. Push live

```
git push
```

4. Go back

```
git checkout dev
```

Useful checks (run anytime)

What branch am I on?

```
git branch
```

active branch has a *

What's changed?

```
git status
```

shows staged / unstaged

What's tracked?

```
git ls-files
```

lists all tracked files

Golden rules

Never code on main

always work on dev,
merge when ready

Commit often

small commits are easier
to undo if needed

Descriptive messages

"add contact form"
not "update"

What to avoid

Never git add . on main

could push dev tools to your live site

Don't share tokens/passwords

invalidate them immediately if exposed
